

Lauki Phones

Network Coverage & 5G Rollout

Coverage data current as of September 2026.

Lauki Phones operates a nationwide 4G network with an active 5G rollout underway in major metro areas. Coverage quality can vary by neighborhood due to terrain, building density, and distance from the nearest tower. The figures below reflect average coverage across each city.

Coverage by City

City	4G Coverage	5G Availability	Overall Coverage
Hyderabad	Excellent	Available	99.5%
Bangalore	Excellent	Available	99.8%
Mumbai	Excellent	Available	99.7%
Delhi	Good	Limited	98.2%
Pune	Good	Available	97.8%

For any city not listed above, Lauki provides standard 4G coverage with 5G availability rolling out on an ongoing basis. Typical coverage in these areas is approximately 95%, with 5G marked as 'Coming soon.'

City Details

Hyderabad

4G coverage: Excellent | 5G: Available | Overall coverage: 99.5%. 5G is live across HITEC City, Gachibowli, Banjara Hills, and the airport corridor. Some pockets in the Old City may still see 4G-only coverage indoors.

Bangalore

4G coverage: Excellent | 5G: Available | Overall coverage: 99.8%. Bangalore has the highest 5G tower density in the Lauki network, with strong coverage across Whitefield, Koramangala, Electronic City, and the central business district.

Mumbai

4G coverage: Excellent | 5G: Available | Overall coverage: 99.7%. 5G is available across South Mumbai, Bandra-Kurla Complex, and Navi Mumbai. High-rise buildings in older parts of the city may experience reduced indoor signal strength.

Delhi

4G coverage: Good | 5G: Limited | Overall coverage: 98.2%. 5G is currently live in Connaught Place, Gurgaon border areas, and select parts of South Delhi, with wider rollout planned over the coming quarters.

Pune

4G coverage: Good | 5G: Available | Overall coverage: 97.8%. 5G coverage is concentrated around Hinjewadi, Kharadi, and Koregaon Park, with 4G providing reliable coverage across the rest of the city.

Troubleshooting Weak Signal

If you're experiencing poor signal or dropped calls, try the following steps before contacting support:

- Toggle Airplane Mode on and off to force your phone to reconnect to the nearest tower.
- Check whether Wi-Fi Calling is enabled in your phone settings — this can improve call quality indoors with weak cellular signal.
- Move closer to a window or open area, as thick concrete walls and basements can significantly reduce signal strength.
- Restart your device, which clears temporary network registration issues.
- Check the Lauki app's Network Status page for any reported outages in your area.
- If the issue persists, contact support with your location and phone model so it can be escalated to the network operations team.

5G Rollout Roadmap

Lauki is expanding 5G coverage in phases, prioritizing metro areas with the highest data usage first. Tier-2 cities including Ahmedabad, Jaipur, and Chandigarh are scheduled for initial 5G activation over the next two rollout phases. Customers with a 5G-capable device and an eligible plan are automatically connected to 5G wherever it's available — no manual setting changes or additional charges are required.

Network coverage and 5G availability are updated periodically as new towers go live. For the most current status in your exact location, check the Network Status page in the Lauki app.
